## OUR THREE SAFETY TECHNOLOGIES

**Concealed blade**  
The blade is not open, rather concealed, shielded from both people and goods alike. Giving you a maximum degree of safety from cut injuries whilst cleverly protecting your goods.

**Fully automatic blade retraction**  
The intelligent cutting tool: as soon as the blade leaves the cutting material, it withdraws automatically into the handle - without your having to do anything. That's what we call "a very high degree of safety".

**Automatic blade retraction**  
Thumbs up for a high degree of safety. As soon as you start cutting, remove your thumb from the slider. The blade will disappear into the handle the moment it loses contact with the material being cut.
